

Case Study

Glen Dimplex, founded in 1973, is the leading distributor of electrical appliances in Ireland and is part of the international Glen Dimplex Group headquartered in Ireland.

Challenge

In 2021 Glen Dimplex needed a special sized air filter for its new Xpelair air purifier unit, [Natural Air 180 Mechanical Ventilation with Heat Recovery and Preheater](#) for the residential market. The F8 ultra fine air filter is a non-standard size of 150mm x 210mm x 25mm and so impossible to purchase off the shelf.

Why Irema?

Irema has 40 years' experience making air filters and air filter material to ASHRAE, CE and ISO16890 international standards. Glen Dimplex needed a custom-sized, standards-compliant air filter for their residential air purifier.

Irema was chosen because the company is one of the few filter manufacturers that makes custom-sized air filters to international industry standards.

Results

Irema is supplying approx 500 F87 ultra fine air filters to Glen Dimplex per month. Like all Irema air filters, they are ASHRAE and CE compliant and meet ISO16890 international standards. All Xpelair Natural Air 180 Mechanical Ventilation units are shipped with Irema manufactured air filters.

"We needed a supplier who could provide the air filters quickly. Irema has become a dependable, regular supplier of ultra fine F8 air filters for our Xpelair MVHR unit. These air purifiers are one of our best sellers for the residential market."
